DEEPER TREATMENTS FOR GORGEOUS SUMMER SKIN

Want gorgeous summer skin? We've found the perfect fix! Beauty addicts across the country are raving about a brand new treatment called DermaFrac™. It uses suction, skin serum infusion and a rolling hand piece to complete a process called needling. Bottom line? It increases collagen regeneration and takes years off your face. Though the word "needling" might have some readers on yes, pins and needles, the treatment is painless! The microscopic needles are so small and short that you don't feel a thing.

The micro-channels created by the hand piece allow the serum infusion to penetrate deep into the skin, creating results you can see. You can choose from a variety of infusions, including anti-aging peptides, skin lighteners, hyaluronic acid moisturizers, acne treatment solutions and more. Even better, it can be used in conjunction with LED therapy and crystal-free microdermabrasion for even better results.

*"Beauty addicts across the country are raving about a brand new treatment called **DermaFrac™**. ... It increases collagen regeneration and takes years off your face."*
