

PROVEN RESULTS

Before After

Fine Lines and Wrinkles
after 6 treatments

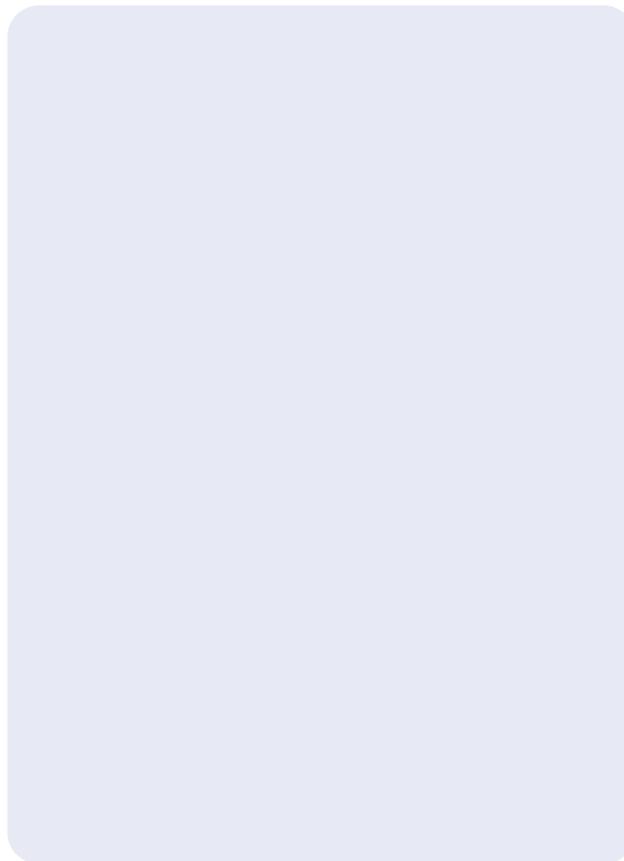

Blackhead Removal
after 1 treatment

Post-Laser Blending
after 4 treatments

Microdermabrasion is a safe, non-surgical skin resurfacing procedure. Many patients notice improvement in the texture and appearance of their skin immediately after the first treatment. The long-term benefits of multiple procedures can be remarkable.

For more information or to schedule your microdermabrasion treatment, please contact your local skin care professional:

Experience a new you with pain-free, no-downtime, non-invasive skin rejuvenation.

What is microdermabrasion?

Microdermabrasion by Genesis Biosystems, Inc. uses either medical grade crystals or disposable crystal-free exfoliation tips to remove the dead, outermost layer of skin. The skin exfoliation process reveals new, living skin cells that are soft, smooth and receptive to nutrients.

What conditions does it treat?

Microdermabrasion is used to treat and/or diminish:

- Fine lines
- Wrinkles
- Sun-damaged skin
- Acne-prone skin
- Oily skin
- Blackheads
- Whiteheads
- Dry or patchy skin
- Superficial age spots
- Hyperpigmentation

Why choose microdermabrasion?

A safe, non-invasive, and virtually painless procedure, microdermabrasion is an excellent alternative to lasers and chemical peels. Compared to these harsher treatments, the benefits of microdermabrasion include:

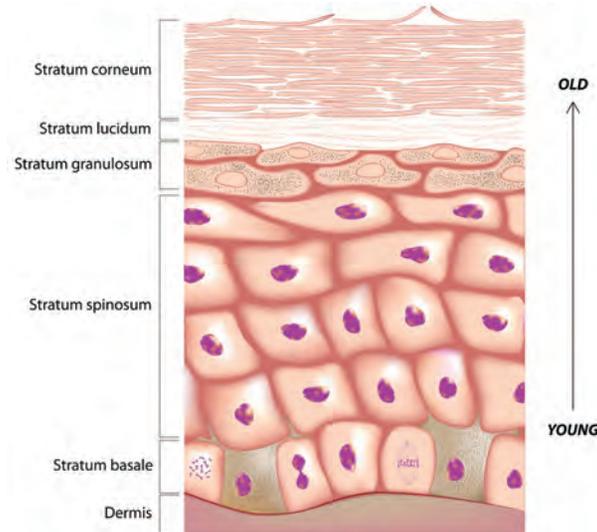

- Less pain or discomfort
- Minimal risk
- Suited for all skin types
- No anesthesia required
- No recovery time
- No hazardous chemicals

The microdermabrasion procedure is performed under the supervision of a certified professional, so you can be confident that you will be treated with the utmost care.

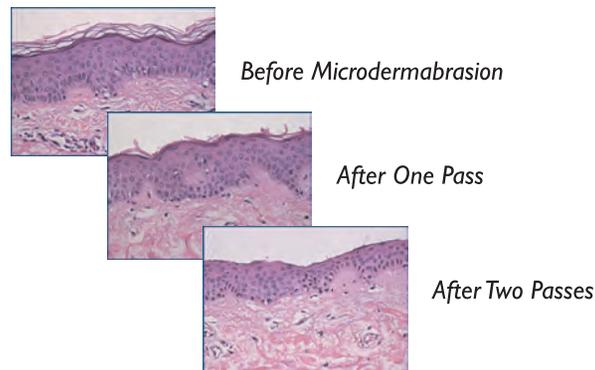

How does it work?

The procedure is performed by using a hand piece that the operator passes over the skin two or three times. This evenly removes the stratum corneum, the outermost layer of the skin, as pictured below:

Removal of the upper layer of the skin encourages new cell growth and reveals the younger, fresher skin below.

The underlying epidermis is also stimulated by the abrasion and the vacuum. This promotes the generation of new collagen, which thickens the dermis and improves resistance to the effects of aging.

How many treatments will I need?

Your skin care professional will advise you regarding your unique skin care needs, but the typical patient receives four to six treatments spaced seven to ten days apart. The average procedure takes less than 30 minutes, depending upon the skin condition, the area to be treated, and the desired outcome. Microdermabrasion is fast, predictable and painless: the perfect lunch hour peel.

Is microdermabrasion safe?

Microdermabrasion is one of the most trusted and sought-after procedures for improving skin tone and texture. With more than 15 years of success in the USA and nearly 30 years in Europe, microdermabrasion has been used to treat millions of satisfied people.
