DermaFrac is an advanced skin rejuvenation treatment that offers an alternative to fractional laser procedures, and is taught at **National Laser Institute** as part of the school's comprehensive course. Using a precision-controlled handpiece, the skin is treated with hundreds of tiny microneedles that painlessly penetrate the dermal layer, creating pathways to infuse topical treatments, including anti-aging peptides, hyaluronic acid moisturizers and acne treatment serums. 800-982-6817, [www.nlionline.com](http://www.nlionline.com)
